AMENDMENTS TO THE SPECIFICATION

COPY

Please replace the following paragraph before the first line of the specification that was added by preliminary amendment on December 12, 2003.

-- This ~~divisional application claims priority to US Patent Application~~ is a continuation of U.S. Application Serial Number 10/213,638, filed August 7, 2002, which claims priority to US Application is a continuation of U.S. Application Serial No. 09/954,646, filed Sept. September 18, 2001, which is a continuation of US Application U.S. Application Serial No. 09/776,125, filed February 2, 2001, which is a continuation of US Application U.S. Application Serial No. 08/858,389, filed May 19, 1997, now U.S. Patent No. 6,228,055, which is a continuation of US Application U.S. Application Serial No. 08/308,097, filed September 16, 1994, now abandoned. --

LISTING OF THE CLAIMS

COPY

This listing of claims will replace all prior versions, and listings, of claims in the application:

1-45: (Canceled)

46. (Previously Presented) A ready to use assembly for delivering a biopsy marker mass, comprising a tube, said tube having an inner lumen and being configured to be received by a biopsy guide cannula, a quantity of ultrasound-detectable bio-resorbable powder disposed within the inner lumen of said tube.

47. (Previously Presented) The assembly of claim 46 comprising a radiopaque material disposed within said tube which comprises a marker formed in a recognizable shape not naturally found within a patient's body.

48. (Previously Presented) A system for marking a biopsy site within a patient, comprising:

a delivery tube having a bore with a proximal portion and a distal portion, a plunger slidably disposed within said bore proximal portion, and a discharge end on said distal portion; and

a quantity of ultrasound detectable bioresorbable powder disposed within said bore distal portion.

COPY

49. (Previously Presented) A delivery system for delivering marker material to a target site within a patient, comprising:
- an elongate member having a distal end, a discharge port in the distal end and an inner lumen extending therein to and in fluid communication with the discharge port in the distal end;
 - a mass of solid particulate marker material disposed within the inner lumen; and
 - an ejector which is advancable with and coupled to said elongate member and which is configured to eject particulate marker material from the discharge port in said distal end of said elongate member.

REMARKS

COPY

Reconsideration of the rejections set forth in the Office Action mailed October 25, 2005, is respectfully requested. Claims 46-49 remain pending in this application.

Claim of Priority

Applicants have amended the priority claim to reflect that the current application is a continuation application of 10/213,638 rather than a divisional. A petition under 37 C.F.R. § 1.78(a)(3) for acceptance of claim of priority and a request for corrected filing receipt have also been filed herewith.

35 U.S.C. § 102

Claims 46-49 were rejected under 35 U.S.C. § 102(b) as being allegedly anticipated by Fisher (USP 6,350,244). Applicants respectfully argue that Fisher does not qualify as a prior art reference to the instant application, which claims priority to U.S. Application Serial No. 08/308,097, filed September 16, 1994. In contrast, the earliest priority date that Fisher is entitled to is February 21, 2000. Because the priority application predates Fisher, Fisher is not prior art, and the rejection over Fisher should be withdrawn.

Information Disclosure Statement

Applicants noted that the non-patent literature references listed on the Forms PTO/SB/08A that were returned with the Office Action mailed October 25, 2005, were crossed out and not initialed. Although no explanation was provided for excluding these references, Applicants have

Some references are in a language other than the English language. A concise explanation of relevance is given below.

DE 935625

This reference discloses a biopsy instrument and method for acquiring subcutaneous biopsies and for removing lesions.

DE 4330958

The invention relates to novel microparticles containing active compound, which, additionally to the active compound(s), contain at least one gas or gaseous phase, media (microparticulate systems) containing these particles, their use for the ultrasonically controlled in vivo release of active compound and process for the production of the particles and media.

DE 4403789

The invention relates to the use of coloured NMR, X-ray or possibly dye-containing ultrasonic-image-producing substances for marking bodily tissues.

FR 2714284

The prosthesis consists of a circular component made from a supple material with a shape memory effect, able to occupy three different positions. In the first position (2) it is extended lengthwise to form a small cylinder which can be introduced through a catheter, with its proximal end closed by a valve (4). In a second position the two compartments (8,10) are inflated separately so that they are deployed on opposite sides of the ruptured wall, while in the third position the compartments are squeezed together to form a double patch on the wall. The prosthesis has a radio-opaque marker (6) between the two compartments which allows its progress through the patient's body to be monitored.
